ORDERING INFORMATION

To order the detector most suitable for your particular needs, select the model number of the detector desired and add the appropriate letter prefix for the mounting desired.

The model numbers for all series of detectors consist of four components: the letter indicates the series; the first three Digits indicate:

1. The maximum room-temperature alpha resolution in keV FWHM for the Series A, B, C, R, ULTRA, ULTRA CAM, and ULTRA-AS.
2. The maximum total system noise width in keV FWHM for the D and F Series detectors.

The next group of digits indicates the minimum active area in mm^2 .

Note that the area indicated for the C Series includes the 4-mm-diameter hole.

The last three digits indicate the depletion depth.

Example: BU-012-100-300 is an ULTRA Partially Depleted detector in a B Mount with a rear Microdot connector with:

- <12 keV alpha resolution
- 100- mm^2 active area
- ≥ 300 - μm depletion depth

This sample detector would be shipped with a standard rear Microdot connector (B Mount). If a rear BNC connector (C Mount) were desired, the model number should be designated:

CU-012-100-300
